Description

This is a collection of my personal notes on the Reticular Action Model (RAM) notation that accompanies the ram package. You can install the released version of ram from GitHub with:

remotes::install_github("jeksterslab/ram")

See GitHub Pages for the html deployment.

Chapter 2

Simple Regression

Let v_1 , v_2 , and u be random variables whose associations are given by the regression equation

$$\begin{split} v_1 &= m_1 + a_{1,2} v_2 + u \\ &= -3.951208 + 1.269259 \cdot v_2 + u. \end{split} \tag{2.1}$$

 v_1 and v_2 are observed variables and u is a stochastic error term which is normally distributed around zero with constant variance across values of v_2

$$u \sim \mathcal{N}\left(m_3 = 0, \omega_{3,3} = 47.659854\right).$$
 (2.2)

 v_2 has a mean of $m_2=13.038328$ and a variance of $\omega_{2,2}=7.151261.$

Below are two ways of specifying this model. The first specification includes the error term u as a latent variable. The second specification only includes the observed variables.

2.1 Specification 1 - Includes Error Term as a Latent Variable

2.1.1 Matrix Notation

$$\text{variables} = \begin{bmatrix} v_1 \\ v_2 \\ u \end{bmatrix} \tag{2.3}$$

$$\mathbf{A} = \begin{bmatrix} 0 & a_{1,2} & 1 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} = \begin{bmatrix} 0 & 1.269259 & 1 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix}$$
 (2.4)

$$\Omega = \begin{bmatrix} 0 & 0 & 0 \\ 0 & \omega_{2,2} & 0 \\ 0 & 0 & \omega_{3,3} \end{bmatrix} = \begin{bmatrix} 0 & 0 & 0 \\ 0 & 7.151261 & 0 \\ 0 & 0 & 47.659854 \end{bmatrix}$$
(2.5)

$$\mathbf{m} = \begin{bmatrix} m_1 \\ m_2 \\ m_3 \end{bmatrix} = \begin{bmatrix} -3.951208 \\ 13.038328 \\ 0 \end{bmatrix} \tag{2.6}$$

To filter the observed variables, use the following filter matrix

$$\mathbf{F} = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \end{bmatrix}. \tag{2.7}$$

To include all variables, use the following filter matrix

$$\mathbf{F} = \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} . \tag{2.8}$$

2.1.3 Expectations

$$\mathbb{E}\left(u\right) = m_3 = 0\tag{2.9}$$

$$\mathbb{E}\left(v_{2}\right)=m_{2}=13.038328\tag{2.10}$$

$$\begin{split} \mathbb{E}\left(v_{1}\right) &= \mathbb{E}\left(m_{1} + a_{1,2}v_{2} + \varepsilon\right) \\ &= \mathbb{E}\left(m_{1}\right) + \mathbb{E}\left(a_{1,2}v_{2}\right) + \mathbb{E}\left(\varepsilon\right) \\ &= m_{1} + a_{1,2}\mathbb{E}\left(v_{2}\right) + \mathbb{E}\left(\varepsilon\right) \\ &= m_{1} + a_{1,2}m_{2} + 0 \\ &= m_{1} + a_{1,2}m_{2} \\ &= -3.951208 + 1.269259 \times 13.038328 \\ &= 12.5978072 \end{split} \tag{2.11}$$

2.1. SPECIFICATION 1 - INCLUDES ERROR TERM AS A LATENT VARIABLE9

$$\mathbb{E}\left(\begin{bmatrix} v_1 \\ v_2 \\ u \end{bmatrix}\right) = \begin{bmatrix} m_1 + a_{1,2} m_2 \\ m_2 \\ m_3 \end{bmatrix} \\
